Beautiful water. Exceptional interiors.

# Beautiful water, sustainably sourced, for exceptional interiors.

Water is fundamental to life and essential to everyday well-being within any working environment. From boardrooms to breakout areas, access to fresh, great tasting water elevates mood and productivity, without compromising on style.

At Borg & Overström we understand the importance of water and sustainable practices within modern workspaces. Utilising the latest technology, our beautifully designed water solutions ensure each glass or bottle is filled with clean,

fresh, filtered water, whilst reducing your carbon and plastic footprint.

From compact, elegant integrated tap systems designed to complement any coffee area, to refined floor-standing coolers with experiential touchless dispense, each of our dispensers have been meticulously crafted to encourage health and hydration. Great workplaces can foster productivity through the provision of great tasting sparkling, chilled, ambient and hot water.

Sustainably superior, filtered drinking water for workplace wellness.

# Impeccable taste, whatever your style.

Synergy between style and function is paramount in modern office environments, but it is personal taste which gives every space its own unique personality.

With ergonomically crafted aesthetics and minimalistic, sophisticated profiles, Borg & Overström dispensers are diligently designed to seamlessly integrate with your interior style and elevate the simple act of drinking water into a beautiful experience.

Inspired by Scandinavian design and built by hand in England, we carefully combine quality materials with advanced technologies to deliver impeccable form and functionality in every drop.

**Great tasting, premium drinking water without the bottle.**

Excellence in every pour.

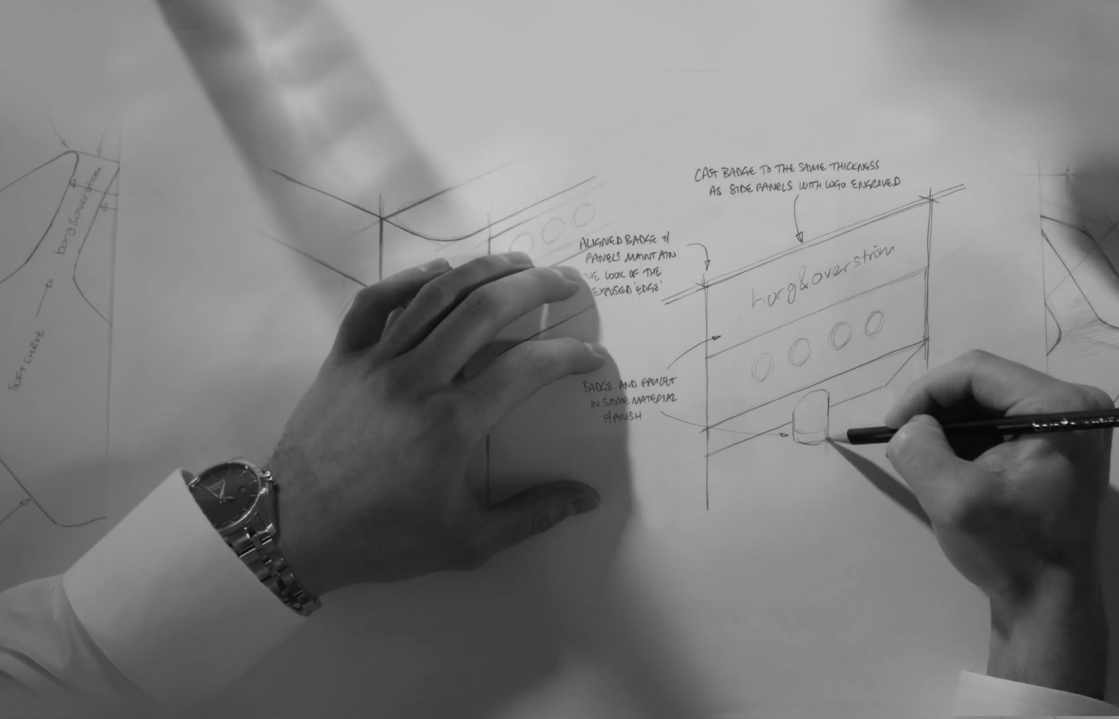

At Borg & Overström we strive to elevate the everyday, delivering desirability through great experiences. Everyone drinks water but how you prefer to enjoy your water is down to personal taste. From decadent DeepSparkle® sparkling water, to instant hot water for a freshly brewed cup of tea, our dispensing solutions will cater for all tastes and desires.

A thoughtfully designed workplace embodies expertly combined elements of ergonomics, wellness, material selection and sustainability. At Borg & Overström we believe access to locally sourced, hygienic water should be a fundamental consideration within working environments.

Beverage centres,  
offering coffee, water  
and healthy drinks  
are providing 'water  
cooler' moments in  
the modern office.

## Exclusively different by design.

Contemporary aesthetics, considered ergonomics, and cutting-edge technology.

Renowned for unique premium aesthetics and exquisite materials, each of our drinking water systems are designed for the discerning eye. Built with durability in mind, we believe that functionality can be beautiful, and that great design makes for enjoyable experiences. We are proud to stand out from the crowd, with confident, contemporary profiles that pair practicality with desirability. From durable Finyl® finishes to anti-microbial, illuminated touch panels, every corner is considered and crafted to deliver the ultimate experience.

Recognised for our industry leading innovations, each of our drinking water systems are designed and developed at our in-house, state-of-the-art research and development centre.

From cutting-edge technologies including patented SensorBeam® and intelligent EcoMode, to our uniquely designed, compact, modular ProCore® and rapid DryChill® systems, Borg & Overström are proud to develop and own our IP, for complete independence, agility and quality assurance.

## Effortless installation by design.

Fast, easy, fuss-free installation with modular design.

From installing an integrated tap system into a marble worktop, to placing a freestanding cooler in a communal area, we design our dispensers to be easy, fast and fuss-free to set up.

Built around a modular principle our range of dispensers feature plug-and-play installation and can be installed without a connection to mains water when paired with a Bluetooth® alarmed waste kit, allowing you to place access to water where you need it.

The introduction of our MonoFit™ drip tray further simplifies any T2 or T3 tap installation, requiring only a single, drill hole, ideal for luxury countertop materials or for upgrading a pre-existing drinking water tap.

Our compact ProCore® unit allows countertop convenience or easy concealment within under counter cupboards, whilst the SimpleFit Vent Kit, provides seamless, hidden ventilation without the need for unsightly grills or complex ventilation systems.

# Sustainably superior, in every environment.

We understand the significant role sustainability and ESG goals play in businesses today. It is a sad and disheartening fact that 80% of plastic water bottles end up in landfill, with each and every one taking up to 500 years to decompose.

Since the very beginning, Borg & Overström set out to provide sustainably superior water, without plastic bottles. On average, a single water dispenser can save 35,000 plastic water bottles in its lifetime, helping businesses to reduce their use of single-use plastic.

From the manufacture of our products to the development of our eco-technology, we design with the environment in mind. As part of our commitment to reduce the impact of every dispenser, our products are nearshored with 80% of components sourced within 200 miles of our zero-to-land-fill, solar powered production facility.

Efficient, environmentally friendly technologies including EcoMode and DryChill® significantly reduce energy consumption. Companies looking to lower carbon footprint, reduce waste or select energy-efficient appliances can move towards those goals by simply placing an integrated tap or dispenser.

**Refreshingly kind to the planet.**

## Premium water without the plastic.

**Bottleless, locally sourced water, filtered for freshness, chilled for convenience.**

For many years bottled water has provided convenient access to water. Fridges in breakout areas were stocked high with single-use bottles, chilled and ready to drink, whilst conference rooms were decked with decadent glass bottles of sparkling. However, as awareness around plastic pollution and environmental impact has grown, single-use bottled water has fallen short compared to more sustainable solutions.

A single point of use dispenser or integrated tap provides instant access

to locally sourced, freshly-filtered, chilled and sparkling water, without contributing to the global plastic pollution epidemic. Placing one dispenser will eliminate around 35,000 single use plastic bottles in its lifetime. With single-use drinks bottles washing up on our shores and littering our waterways, switching to refillable bottles and glasses is a simple, sustainable change that we can all make. This shift doesn't compromise on quality or convenience, as currently only 9% of plastic waste ends up being recycled.

## Green technology.

**Energy-efficient, environmentally-friendly technology in every drop.**

As part of our efforts to improve the sustainability of our dispensers, we are constantly working to develop ever-greener eco-friendly technologies. From intelligent EcoBoil temperature sensing, to our energy-efficient DryChill® cooling system, which uses only eco-refrigerant gas, with negligible GWP, we design our dispensers to reduce energy consumption and lower running costs.

Traditional coolers or beverage fridges within the workplace run continuously, consuming energy even when there is

no one in the office. EcoMode, Borg & Overström's latest development in sustainable design, will ensure that you are not unnecessarily chilling your water overnight or when there is no one around to use it. This intelligent, energy-saving technology places your water dispenser into a 'sleep mode' when not being used, saving around 70% on energy consumption. Activated by prolonged darkness or inactivity, this latest green technology is better for your energy costs and better for the environment.

# An effortless upgrade to elevate any breakout space with MonoFit™.

We realise that reducing disruption and upheaval during workplace refits and upgrades is vitally important. As coffee corners are created and beverages centres take pride of place, MonoFit™ can provide an effortless way to enhance any space.

Adding a T2 or T3 integrated drinking water tap can elevate any kitchen or breakout area, delivering quality, chilled, hot and sparkling drinking water in an instant. Combined with our versatile MonoFit™ font, for the ultimate simple-fit integrated tap solution.

Reducing worktop cutting by 90% the innovative, non-invasive design of the MonoFit™ paired with a T3 or T2 tap, allows for simple, straightforward installation

**Easily upgrade and enhance any space.**

Excellence in every pour.

into virtually any material. The single standard-sized hole eliminates the need for specialist cutting, allowing all services to be seamlessly delivered through the simple incision.

Without compromising on looks, the MonoFit's elegant elevation maintains the minimalist Borg & Overström aesthetic, while preserving the countertop, should floor plans and office layouts shift in the future.

Looking to replace an existing integrated tap system? MonoFit™ can be neatly installed over your previous tap's complex cut-out, allowing for an easy upgrade with a seamless finish. After all, we believe everyone should be able to experience great water and exceptional design.

Countertop convenience with a 90% smaller cutout.

# Just add water...

It really is as simple as just adding water. Easily place a floorstanding dispenser in any communal area or enhance your tea point with a digital tap system installed directly into the worktop next to a coffee machine. The T3 tap with instant hot water is ideal for pouring the perfect cup of tea, using less energy, and taking up less counter space than a kettle.

## Drink local. Save plastic.

Good for you, great for the planet - reduce single-use plastic every time you refill your glass or bottle.

## Be productive. Drink water.

Increase workplace productivity and wellbeing by encouraging healthy hydration by providing easy access to great tasting drinking water.

## Easy install. Simple servicing.

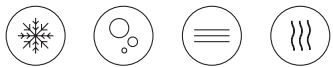

Quick and easy to install and service by our trained partners. On hand customer support team.

## Distinctively different.

Carefully crafted for a distinctive and minimalist appearance, using robust, premium materials and thoughtful ergonomics.
